

Meeting Agenda

Group: Hubba

Date: 2018-10-04

Chair: Johannes

Participants: Li, Camilla, Nils-Martin, Alexander, Johannes, Jian

Objectives (5 min)

- Problems with saving, emailed Alex and got the exact same guide back as we already have tried to follow.
- Miscommunication: Several parts of the group have worked on frontpage and its functionality.
- TRAVIS!
- More comments in the code also!
- More unit tests!

Reports (15 min) from previous meeting

- **Li:** Added menu and settings xml files. Also added menu button on frontpage that is clickable. Fixed with domain model and design model.
- **Johannes:** Fixed with domain model, design model and started on sequence diagrams. Fixed with frontpage, resulted in major merge conflicts that we are currently are solving. This is due to miscommunication early on in the project.
- **Nils-Martin:** Made a mockup of a server for hubba. Added hubba in model also discovered that not all functions are in the correct classes.
- **Camilla:** Add habit has gotten more functionality in the view but backend functionality not yet implemented. Fixed with, domain model, design model and started on sequence diagrams. A little sad about not having more time this week (for the project).
- **Jian:** Fixed with front page.
- **Alexander:** Have read the meeting document from monday. Has been sick the rest of the week with eye inflammation (ophthalmia).

Discussion items (35 min)

- Before deciding what to do during the next week we need to make clear that everybody understands exactly what the tasks means.

- REMEMBER TO COMMENT AND MAKE UNIT TESTS!!!
- The folders are confusing, refactor names for the unit test folders.
- Make the packages for view, viewmodel and model. This really needs to be done so that we can structure the project correctly.
- Travis will be discussed with mentor this afternoon.
- Saving will also be discussed with mentor, we have tried to follow the tutorial but it does not work and we don't understand why.

Outcomes and assignments (5 min)

- **Everyone** should learn git inspect.
- **Camilla:** will continue with her previous assignment (Started implementing habit class in calendar class, but has not gotten everything done since we haven't implemented enough of the habits values when creating it. This makes it hard to get them into the calendar.)
- **Li:** Will continue with implementing functionality with menu and settings.
- **Johannes/Alexander:** Will fix the major merge conflict. Alexander: RAD Johannes: Keep going on front page.
- **Nils-Martin:** Check how to save stuff. Achievement is added to list when achieved.
- **Jian:** Fix the habit view so that the correct information is shown. Also check to see implement edit habit.
- **Outcomes from discussion items. Write down what's decided and why it was decided. Sync with other documentation (add terms to wordbook).**
- **(re)Assign to each group member which issues to solve.**

Wrap up

- **Next meeting:** 2018-10-08 at 0900
