# Meeting Agenda

**Group:** Hubba
**Date:** 2018-10-11
**Chair:** Johannes
**Participants:** Li, Nils-Martin, Camilla, Alexander, Johannes, Jian

## Objectives (5 min)

- Enum: Where should they be (frequency and state)? One is a class and one is in Habit, how should they be placed?
- How should group habits be created? How are requests sent to other users? Does the group have the list of users? Does the user have a list of groups it is in? Clarify these.
- Travis
- RAD, SDD and final report (deadline 21/10 and 28/10)
- Spinner of the week: Remove and just check of days?
- Error message: Not being able to create a habit without state
- Open Habits: Have not succeeded. Linear layout does not allow pressing different objects in linear layout. Alternative solution?
- Themes
- Tests

## Reports (15 min) from previous meeting

- **Alexander:** Has made gradle build. But how it is installed locally affects a lot. Click on list items, not working yet.

- **Camilla:** All checkboxes are checkable. Monthly is now remade to choose one date and adds it to calendar. Error message shows up when all is not answered while trying to create a habit. Entire calendar is in Master.

- **Jian:** Tried to fix open habit, has not worked. Added stuff in frequency.

- **Johannes:** Tried to get themes implemented. Made small adjustments to themes to make them work. Changed small things in xml files. Created two themes, also added a lot of comments because attributes can be unclear (In pink fluffy theme).

- **Nils-Martin:** Fixed achievements so that it adds streaks and numOfHabits achievements. Implemented saving, not sure that it works entirely yet. Tried to write a test for this but got a lot of weird messages.

- **Li:** HubbaModel now singleton. Started a branch for groups. RAD and SDD a little little done. Begun functionality for profile in menu and xml done for groups and habits in menu.

**- Each group member reports outcome of assigned issues, see also 'outcomes and assignments'.**

## Discussion items (35 min)

**-** Calendar error message: Write what is missing in message. Liked the top one, not the toast. Could it perhaps be closer to the thing missing? Red square around.

- Enum: Separate classes or in other classes? Habit should have it.

- Master has red marks, Nils-Martin will fix these.

- Groups: How should group habits be created? And how should they work? Discuss further tomorrow 1100.

## Outcomes and assignments (5 min)

**-** <span style="color:red">**Everybody**</span> **needs more code and unit tests also work on RAD and SDD.**

- Camilla: get red square around the part that is missing when creating habit.

- Li: work on getting habits into menu. Start on groups.

- Johannes: Themes, until monday check how to implement.

- Nils-Martin: Start on groups. Help everybody get save to work. Fix the last part of saving.

- Jian: Open habitListItems on front page, with Alexander

- Alexander: Move Enum to AddHabit Class, work on opening created habits.

## Wrap up

**- Next meeting: 2018-10-15 09.00 in M1204**
